

Curving Chicago One Icon After Another

Chicago Metal Rolled Products has been curving steel for over 100 years. Our work is seen in structures such as airports, skywalks and museums across the country.

Throughout Chicagoland, you will find the fingerprints of Chicago Metal Rolled Products on iconic architectural structures including the **Pritzker Pavilion at Millennium Park**,

Nichols Bridgeway, **Navy Pier**,

Wrigley Field and the beautiful

River Point Tower. CMRP rolled

10" and 12" square & rectangular

tubes for structural support

of the roof framing and

parabolic arch entryway

for River Point Tower.

Each of these tubes

were rolled level

to as many as

3 radii per piece.
